SUBJECT INDEX

to Volume 133, January–April 1993

Agaricus bisporus, meiotic behavior and linkage relationships, 225
Alcohol dehydrogenase, gene encoding ADH2 in petunia, structure, expression and chromosomal location, 999
Allele
  conditional, yeast *HOP1* gene, 785
  frequencies at microsatellite loci, stepwise mutation model, human, 735
  hydrid dysgenesis-induced, *ovarian tumor* gene structure, *Drosophila melanogaster*, 253
  marker effects of G to C transversions, intragenic recombination and mismatch repair, *Schizosaccharomyces pombe*, 825
  RAD52, C-terminal truncation protein, yeast, 39
  sizes, intraclass and interclass correlations, loci in DNA typing data, 411
Anemia, Fanconi, characterization of *mus308* gene, *Drosophila melanogaster*, 87
Animal Breeding and Genetics Research Organization, quantitative genetics in Edinburgh: 1947–1980, 137
Apis mellifera, 97
Armadillidium vulgare, conflict between feminizing sex ratio distorters, autosomal masculinizing gene, 247
Aspergillus nidulans, *brlA* response elements, genetic selection, yeast, 29

Bacillus subtilis, testing of DNA repair hypothesis, evolution of natural transformation, 755
Bacteriophage λ, propagation of palindromic DNA, cruciform extrusion, central asymmetry, 143
Bacteriophage Mu*d*, lethal transposition in Rec$^-$ strains, *Salmonella typhimurium*, 17
Behavior
  genetics of feeding, *Caenorhabditis elegans*, 897
  grooming, mutations affecting neural circuitry, *Drosophila melanogaster*, 581
Bernstein, Felix, first human marker locus, 4
Bithorax-complex, modulation of *Abd-B* functions, tumorous-head, *Drosophila melanogaster*, 593
Blood groups, first human marker locus, Felix Bernstein, 4

Caenorhabditis elegans, 79, 237, 527, 543, T12, T13, 919
Camptothecin, mutation in DNA topoisomerase I, *RAD9*-dependent cell cycle arrest, yeast, 799
Castle, William E., pioneer mammalian geneticist, 751
Cell cycle, *RAD9*-dependent arrest, mutation in DNA topoisomerase I, yeast, 799
Cell wall, β-glucan synthesis, mutational analysis of killer toxin resistance, yeast, 837
Chiasma
  interference
    function of genetic distance, 679
    linkage group XIX, *Chlamydomonas reinhardtii*, 865
Chlamydomonas reinhardtii, 865
Chloroplasts, plastid transmission in *Oenothera*, plastome-genome interactions, 989
Chromatid, linkage group XIX, *Chlamydomonas reinhardtii*, 865
Chromosome *2*, delimiting the location, scrapie prion incubation time gene, mouse, 879
Chromosome *III*
  meiotic disjunction and recombination, short chromosomal region with major roles, yeast, 159
  meiotic nondisjunction and recombination, homologous fragments, yeast, 149
Chromosome *B*, deletion analysis of *Paternal Sex Ratio*, *Nasonia vitripennis*, 635
Chromosome *X*
  feedback control of sex determination, dosage compensation, *Caenorhabditis elegans sdc-3* mutations, 875
  meiotic drive and unisexual hybrid sterility, *Drosophila*, 421
Chromosome *Y*
  kl-3 loop, tektin-like protein, *Drosophila melanogster*, 569
  meiotic drive and unisexual hybrid sterility, *Drosophila*, 421
Chromosomes
  bacterial, prophage insertion, thirty years ago, 433
  Escherichia coli, molecular evolution, sequence comparisons, 455
  heterozygous Robertsonian, recombination suppression, mouse, 647
  location and product of gene encoding ADH2, Petunia, 999
Coalescent theory, allele frequencies at microsatellite loci, stepwise mutation model, 735
Cold, sensitivity of protein export, Cs *sec* mutants, *Escherichia coli*, 763
Complementation
  genes required for meiotic recombination, yeast, 51
  genetic analysis of *stoned* locus, interaction with *dunce/shibire/Suppressor of stoned*, *Drosophila melanogaster*, 955
  intragenic, yeast *RAD52* allele, C-terminal truncation protein, 39
  second site non-complementation with unlinked deficiency, major sperm protein assembly, *Caenorhabditis elegans spe-6* gene, 79
Conidiophore, Aspergillus *brlA* response elements, ge-

netic selection, yeast, 29
Coprinus cinereus, changes in number of reiterated ribosomal RNA genes, life cycle, 203
Crossover, chiasma interference, function of genetic distance, 679
Cruciform, extrusion in *Escherichia coli*, effects of central asymmetry, propagation of palindromic DNA, 143
Cyclic AMP, genetic analysis of *stoned* locus, interaction with *dunce/shibire/Suppressor of stoned*, *Drosophila melanogaster*, 955
Cytochrome *b*, gene, Leber's hereditary optic neuropathy, etiological role of mutation, 133

Deletion analysis, *Paternal Sex Ratio*, *Nasonia vitripennis*, 635
Diploidy, selection and evolution, genetic life cycles, 401
DNA
  Bari-1 transposon-like family, unique heterochromatic organization, *Drosophila melanogaster*, 335
  deletion analysis of *Paternal Sex Ratio*, *Nasonia vitripennis*, 635
  double strand breaks, short chromosomal region with major roles, yeast chromosome *III*, 159
  evolution in *Drosophila*, function and developmental stage of expression, 291
  meiotic mismatch repair, quantitation on segregation patterns, *Schizosaccharomyces cerevisiae*, 815
  mismatch repair and intragenic recombination, marker effects of G to C transversions, *Schizosaccharomyces pombe*, 825
  palindromic, effects of central asymmetry, cruciform extrusion, 143
  prophage insertion into bacterial chromosomes, thirty years ago, 433
  sequence variation at *period* locus, within and among species, *Drosophila melanogaster* complex, 375
  typing data, loci in, allele sizes, 411
DNA, mitochondrial
  lengthy duplications, molecular characterization, *Romanomermis culicivorax*, 933
  mutations in *MGI* genes, conversion of *Kluyveromyces lactis*, petite-positive yeast, 517
DNA polymerase α, -primase complex, conditional mutations, yeast DNA primase genes, 183
DNA repair
  a/α-control, genetic and physiological aspects, yeast, 489
  testing of hypothesis, evolution of natural transformation, *Bacillus subtilis* and *Haemophilus influenzae*, 755
DNA topoisomerase I, mutation causing DNA damage, *RAD9*-dependent cell cycle arrest, yeast, 799
Dosage compensation, feedback control of sex determination, *Caenorhabditis elegans sdc-2* mutations, 875
Drosophila, 265, 291, 421, 679
Drosophila melanogaster, 87, 253, 279, 299, 307, 315, 335, 347, 361, 375, 569, 581, 593, 605, 623, 943, 955, 967
Drosophila simulans, 299, 561

Element, presence or absence of, population genetic study, evolution of SINEs, 1023
Escherichia coli, 9, 143, 433, 439, 449, 455, 763
Evolution
  DNA, rates of, function and developmental stage, 291
  molecular, *Escherichia coli* chromosome, sequence comparisons, 455
  mutation models, quantitative genetic variation, 727
  natural transformation, testing of DNA repair hypothesis, *Bacillus subtilis* and *Haemophilus influenzae*, 755
  selection and, genetic life cycles, 401
  SINEs, population genetic study, polymorphism, 1023

Feeding, genetics of, *Caenorhabditis elegans*, 897
Fertility
  kl-3 loop of *Y* chromosome, tektin-like protein, *Drosophila melanogaster*, 569
  variability of *Drosophila melanogaster ref(2)*P protein, control of multiplication, sigma rhabdovirus, 943
Forensics, intraclass and interclass correlations of allele sizes, loci in DNA typing data, 411

Gene
  Abd-B bithorax-complex functions, modulation by tumorous-head, *Drosophila melanogaster*, 593
  ama-1, post-transcriptional regulation of RNA polymerase II levels, *Caenorhabditis elegans*, 237
  CAN1, alteration of Ty target specificity, RAD6, 499
  COX2, yeast messenger RNA, *PET111* action in 5′-leader, 509
  CUP1, mutational analysis of pre-mRNA splicing, yeast, 851
  deleterious mutations, synergistic action, metabolic control theory, 127
  delta, complex function and expression, *Drosophila melanogaster*, 967
  disease-resistance, unequal exchange and meiotic instability, *Rp1* region of maize, 119
  functionally related, stimulation of early meiotic gene expression, yeast, 67
  HOP1, conditional allele, yeast, 785
  IME1
    activation of, yeast, 67
    genetic evidence for transcriptional activation, yeast, 775

instability, mediation by *hobo* transposable elements, *Drosophila melanogaster*, 315
KRE11, mutational analysis of killer toxin resistance, yeast, 837
maternal hybrid rescue, *Drosophila simulans*, 299
mitochondrial cytochrome *b*, Leber's hereditary optic neuropathy, etiological role of mutation, 133
mog-1, switch from spermatogenesis to oogenesis, *Caenorhabditis elegans*, 919
molecular characterization, lengthy mitochondrial DNA duplications, *Romanomermis culicivorax*, 933
mus308, characterization, *Drosophila melanogaster*, 87
ovarian tumor
hybrid dysgenesis-induced alleles, *Drosophila melanogaster*, 253
P element-induced mutations, *Drosophila*, 265
PET111, action in 5′-leader, yeast mitochondrial *COX2* messenger RNA, 509
preg^{+}, insertional mutagenesis, *Neurospora crassa*, 193
RAD52 allele, C-terminal truncation protein, yeast, 39
RED1 and *REC104*, conditional allele, yeast *HOP1* gene, 785
*ref(2)*P, control of multiplication of sigma rhabdovirus, *Drosophila melanogaster*, 943
reiterated ribosomal RNA, changes in number of, life cycle of *Coprinus cinereus*, 203
requirements for meiotic recombination, yeast, 51
scrapie prion incubation time, delimitation of location, mouse, 979
spe-6, major sperm protein assembly, *Caenorhabditis elegans*, 79
tra-1, molecular cloning and duplication, *Caenorhabditis elegans*, 543
tuh-1 and *tuh-3*, modulation of *Abd-B* thorax-complex functions, *Drosophila melanogaster*, 593
unc-7, coordinated locomotion, *Caenorhabditis elegans*, 527
Zygotic hybrid rescue, hybrid lethal systems, *Drosophila melanogaster*, 307
Genome
conflicts underlying Haldane's rule, 425
mitochondrial, complete sequence and organization, honeybee, 97
-plastome interactions, plastid transmission, *Oenothera*, 989
β-Glucan, synthesis in cell wall, mutational analysis of killer toxin resistance, yeast, 837
Grooming, behavior, factors affecting neural circuitry, *Drosophila melanogaster*, 581

Haemophilus influenzae, testing of DNA repair hypothesis, evolution of natural transformation, 755
Haldane's rule, genomic conflicts, 425
Haploidy, selection and evolution, genetic life cycles, 401
Heterochromatin, unique organization, *Bari-1* transposon-like family, *Drosophila melanogaster*, 335
Heteroduplex, strand-specificity, restriction-stimulated recombination, RecE pathway in *Escherichia coli*, 439
HLA complex, *HLA-A* and *HLA-B* loci, contrasting roles of interallelic recombination, human, 667
Honeybee, mitochondrial genome, complete sequence, genome organization, 97
Human
allele frequencies at microsatellite loci, stepwise mutation model, 735
contrasting roles of interallelic recombination, *HLA-A* and *HLA-B* loci, 667
Leber's hereditary optic neuropathy, etiological role of mutation, mitochondrial cytochrome *b* gene, 133
Hybrid dysgenesis
-induced alleles of *ovarian tumor* gene, structure and expression, *Drosophila melanogaster*, 253
repression by naturally occurring *P* elements, *Drosophila melanogaster*, 605
Hybrid lethality
maternal hybrid rescue gene, *Drosophila simulans*, 299
Zygotic hybrid rescue gene, *Drosophila melanogaster*, 307
Hybrid sterility, genomic conflicts underlying Haldane's rule, 425

In Memoriam, Marcus M. Rhoades, 3
Insertion sequences, same classes of, natural populations, *E. coli* and *Salmonella typhimurium*, 449
Ion channels, molecular and genetic analysis of *unc-7*, coordinated locomotion, *Caenorhabditis elegans*, 527

Kluyveromyces lactis, conversion into petite-positive yeast, mutations, *MGI* gene, 517

Leber's hereditary optic neuropathy, etiological role of mutation, mitochondrial cytochrome *b* gene, human, 133
Life cycle, genetic, selection and evolution, 401
Locomotion, coordination, analysis of *unc-7*, *Caenorhabditis elegans*, 527
Locus
DNA typing data, intraclass and interclass correlations, allele sizes, 411
first human marker, Felix Bernstein, 4
HLA-A and *HLA-B*, contrasting roles of interallelic recombination, human, 667
kété, genetic control of pheromones, *Drosophila simulans*, 561
microsatellite, allele frequencies, stepwise mutation model, 735
period, DNA sequence variation, *Drosophila mela-*

nogaster complex, 375
stoned, interaction with *dunce*, *shibire* and *Suppressor of stoned* variants, 955
Lysogens, lethal transposition in Rec⁻ strains, *Salmonella typhimurium*, 17

Maize
non-cell-autonomous expression, heterochronic *Teopod1* and *Teopod2* mutations, 389
Suppressor-mutator transposable elements, TnpA *trans*-activation, transgenic tobacco, 1009
unequal exchange and meiotic instability, disease-resistance genes, *Rp1* region, 119
Mammals, pioneer geneticist William E. Castle, 751
Mapping
linkage group XIX, *Chlamydomonas reinhardtii*, 865
meiotic behavior and linkage relationships, *Agaricus bisporus*, 225
Maternal effects, *Abd-B* bithorax-complex functions, modulation by tumorous-head, *Drosophila melanogster*, 593
Mating type locus, a/α-control of DNA repair, genetic and physiological aspects, yeast, 489
Meiosis
behavior and linkage relationships, *Agaricus bisporus*, 225
chiasma interference, function of genetic distance, 679
disjunction, short chromosomal region with major roles, yeast chromosome *III*, 159
drive, unisexual hybrid sterility, *Drosophila*, 421
formation of intragenic secondary insertions, *P* element transposition, *Drosophila melanogaster*, 623
genetic evidence for transcriptional activation, yeast *IME1* gene product, 775
genomic conflicts underlying Haldane's rule, 425
instability and unequal exchange, disease-resistance genes, *Rp1* region of maize, 119
mismatch repair, quantitation on segregation patterns, *Schizosaccharomyces pombe*, 815
nondisjunction and recombination of chromosome *III*, homologous fragments, yeast, 149
recombination in yeast, new required genes, 51
-specific genes *RED1* and *REC104*, conditional allele, yeast *HOP1* gene, 785
stimulation of early gene expression, functionally related genes, yeast, 67
Metabolic control theory, synergistic action, deleterious mutations, 127
Methylation, maize *Suppressor-mutator* transposable elements, TnpA *trans*-activation, transgenic tobacco, 1009
Migration, genetic drift and, systems of subpopulations, spatial and space-time correlations, 709
Mitochondria
COX2 messenger RNA, *PET111* action in 5′-leader, yeast, 509
cytochrome *b* gene, Leber's hereditary optic neuropathy, etiological role of mutation, 133
fusion, control by genetic system, *Physarum polycephalum*, 213
genome, complete sequence and organization, honeybee, 97
Mitosis, characterization of *mus308* gene, *Drosophila melanogaster*, 87
Mouse
recombination suppression, heterozygous Robertsonian chromosomes, 647
scrapie prion incubation time gene, delimitation of location, chromosome 2, 979
Mutagenesis, insertional, cloning of *preg*⁺ gene, *Neurospora crassa*, 193
Mutagens, characterization of *mus308* gene, *Drosophila melanogaster*, 87
Mutants
Abd-B bithorax-complex functions, modulation by tumorous-head, *Drosophila melanogaster*, 593
Cs *sec*, cold sensitivity of protein export, *Escherichia coli*, 763
genes required for meiotic recombination, yeast, 51
genetic analysis of *stoned* locus, interaction with *dunce*/*shibire*/*Suppressor of stoned*, *Drosophila melanogaster*, 955
rad1 of yeast, replication-dependent sister chromatid recombination, 469
Mutations
conditional, DNA polymerase α-primase complex, yeast DNA primase genes, 183
deleterious, synergistic action, metabolic control theory, 127
etiological role, Leber's hereditary optic neuropathy, mitochondrial cytochrome *b* gene, 133
lethal transposition in Rec⁻ strains, *Salmonella typhimurium*, 17
missense, *RAD52* allele, C-terminal truncation protein in yeast, 39
models and quantitative genetic variation, 727
neural circuitry required for grooming behavior, *Drosophila melanogaster*, 581
P element-induced, maternal activity, *Drosophila ovarian tumor* gene, 265
P transposon-induced dominant enhancer, position-effect variegation, *Drosophila melanogaster*, 279
sdc-3 of *Caenorhabditis elegans*, feedback control of sex determination, dosage compensation, 875
statistical tests of neutrality, 691
stepwise model, allele frequencies, microsatellite loci, 735
stimulation of early meiotic gene expression, functionally related genes, yeast, 67
Teopod1 and *Teopod2*, non-cell-autonomous expression, maize, 389

Nasonia vitripennis, deletion analysis of *Paternal Sex Ratio*, 635

Neural circuitry, grooming behavior in *Drosophila melanogaster*, isolation of mutations, 581
Neurospora crassa, 193, 679
Neutrality, mutations, statistical tests, 691

Oenothera, plastome-genome interactions, plastid transmission, 989
Oogenesis
complex function and expression of *delta*, *Drosophila melanogaster*, 967
hybrid dysgenesis-induced alleles, *ovarian tumor* gene, *Drosophila melanogaster*, 253
P element-induced mutations, maternal activity, *Drosophila ovarian tumor* gene, 265
switch from spermatogenesis, *mog-1* gene, *Caenorhabditis elegans*, 919
Organelle, plastid transmission in *Oenothera*, plastome-genome interactions, 989

P element
efficient and dispersed local transposition, *Drosophila* females, 361
hybrid dysgenesis-induced alleles, *ovarian tumor* gene, *Drosophila melanogaster*, 253
-induced mutations, maternal activity, *Drosophila ovarian tumor* gene, 265
naturally occurring, repression of hybrid dysgenesis, *Drosophila melanogaster*, 605
preferential transposition, nearby chromsomal sites, *Drosophila*, 347
P transposon-induced dominant enhancer mutations, *Drosophila melanogaster*, 279
transposition, sister chromatid pairs, intragenic secondary insertions during meiosis in *Drosophila melanogaster*, 623
Petunia, gene encoding ADH2, structure, expression and chromosomal location, 999
Pheromones, genetic control, *kété* locus, *Drosophila simulans*, 561
Phylogeny, gene encoding ADH2 in Petunia, structure, expression and chromosomal location, 999
Physarum polycephalum, genetic system controlling mitochondrial fusion, 213
Plasmid
genetic system controlling mitochondrial fusion, *Physarum polycephalum*, 213
telomere-mediated segregation, transcriptional repression, yeast, 171
Plastid, transmission in *Oenothera*, plastome-genome interactions, 989
Polymorphism
evolution of SINEs, population genetic study, 1023
RFLP, meiotic behavior and linkage relationships, *Agaricus bisporus*, 225
Population
DNA sequence variation at *period* locus, within and among species, *Drosophila melanogaster* complex, 375
genetic study of evolution of SINEs, polymorphism, presence or absence of an element, 1023
natural, same classes of insertion sequences, *E. coli* and *Salmonella typhimurium*, 449
systems of subpopulations, genetic drift and migration, spatial and space-time correlations, 709
Position-effect variegation, *P* transposon-induced dominant enhancer mutations, *Drosophila melanogaster*, 279
Prions, incubation time gene of scrapie, delimitation of location on chromosome *2*, mouse, 979
Prophage, insertion, bacterial chromosomes, thirty years ago, 433

RAD6, ubiquitin-conjugating enzyme, distribution of Ty1 retrotransposon integration positions, yeast, 499
RAD9, -dependent cell cycle arrest, mutation in DNA topoisomerase I, yeast, 799
Recombination
conditional mutations in yeast DNA primase genes, DNA metabolism, DNA polymerase α-primase complex, 183
genetic system controlling mitochondrial fusion, *Physarum polycephalum*, 213
homologous, hotspot created by Tn*7*, *Escherichia coli*, 9
interallelic, *HLA-A* and *HLA-B* loci, human, 667
intermediates, crossing over, *Neurospora crassa*, 679
intragenic, marker effects of G to C transversions, *Schizosaccharomyces pombe*, 825
meiotic disjunction and double strand breaks, short chromosomal region with major roles, yeast chromosome *III*, 159
meiotic mismatch repair, quantitation on segregation patterns, *Schizosaccharomyces pombe*, 815
meiotic nondisjunction and, chromosome *III* and homologous fragments, yeast, 149
molecular evolution, *Escherichia coli* chromosome, 455
mutations in *MGI* genes, conversion of *Kluyveromyces lactis*, petite-positive yeast, 517
replication-dependent sister chromatid, *rad1* mutants, yeast, 469
restriction-stimulated, heteroduplex strand-specificity, RecE pathway in *Escherichia coli*, 439
suppression, heterozygous Robertsonian chromosomes, mouse, 647
unequal exchange and meiotic instability, disease-resistance genes, *Rp1* region of maize, 119
Replication, -dependent sister chromatid recombination, *rad1* mutants, yeast, 469
Reproduction, hybrid lethal systems, *Drosophila melanogaster* species complex, 299, 307
Retroposons, population genetic study, evolution of SINEs, polymorphism, 1023
Retrotransposon, distribution of Ty1, ubiquitin-conjugating enzyme RAD6, yeast, 499

Rhabdovirus, sigma, control of multiplication, *Drosophila melanogaster ref(2)*P protein, 943
Rhoades, Marcus M., *In Memoriam*, 3
RNA, ribosomal, changes in number of reiterated genes, life cycle of *Coprinus cinereus*, 203
RNA, messenger
  mutational analysis of pre-mRNA splicing, reporter gene *CUP1*, yeast, 851
  yeast mitochondrial *COX2*, *PET111* action in 5′-leader, 509
RNA polymerase II, levels in *Caenorhabditis elegans*, post-transcriptional regulation, 237
Romanomermis culicivorax, lengthy mitochondrial DNA duplications, molecular characterization, 933

Saccharomyces cerevisiae, 29, 39, 51, 67, 149, 159, 171, 183, 469, 489, 499, 509, 775, 785, 799, 837, 857
Salmonella typhimurium, 17, 449
Schizosaccharomyces pombe, 815, 825
Scrapie, prion incubation time gene, delimitation of location on chromosome 2, mouse, 979
Segregation, patterns in *Schizosaccharomyces pombe*, quantitation, meiotic mismatch repair, 815
Sequence, comparisons, molecular evolution, *Escherichia coli* chromosome, 455
Sex determination
  feedback control, dosage compensation, *Caenorhabditis elegans sdc-3* mutations, 875
  molecular cloning and duplication, *tra-1*, *Caenorhabditis elegans*, 543
  switch from spermatogenesis to oogenesis, *mog-1* gene, *Caenorhabditis elegans*, 919
  testing of DNA repair hypothesis, evolution of natural transformation, *Bacillus subtilis* and *Haemophilus influenzae*, 755
Sex ratio distorters, feminizing, autosomal masculinizing gene, *Armadillidium vulgare*, 247
SINEs, evolution of, population genetic study, polymorphism, 1023
Sister chromatid exchange
  analysis of pairs, *P* element transposition, *Drosophila melanogaster*, 623
  replication-dependent recombination, *rad1* mutants, yeast, 469
Speciation
  DNA sequence variation at *period* locus, *Drosophila melanogaster* complex, 375
  hybrid lethal systems, *Drosophila melanogaster* species complex, 299, 307
  meiotic drive and unisexual hybrid sterility, *Drosophila*, 421
Sperm, major protein assembly, *spe-6* gene, *Caenorhabditis elegans*, 79
Spermatogenesis, switch to oogenesis, *mog-1* gene, *Caenorhabditis elegans*, 919
Sporulation, genetic evidence for transcriptional activation, yeast *IME1* gene product, 775
Synaptonemal complex, conditional allele of yeast *HOP1* gene, suppression by overexpression of *RED1* and *REC104*, 785

Tektin, -like protein, *kl-3* loop of *Y* chromosome, *Drosophila melanogaster*, 569
Telomere, -mediated plasmid segregation, transcriptional repression, yeast, 171
Temperature, cold sensitivity of protein export, Cs *sec* mutants, *Escherichia coli*, 763
Tobacco, transgenic, TnpA *trans*-activation, methylated maize *Suppressor-mutator* transposable elements, 1009
Transcription
  activation of yeast *IME1* gene product, genetic evidence, 775
  activator NUC-1, insertional mutagenesis, *Neurospora crassa*, 193
  Aspergillus *brlA* response elements, genetic selection, yeast, 29
Transformation, natural, evolution of, *Bacillus subtilis* and *Haemophilus influenzae*, 755
Transposable elements
  hobo, mediation of genetic instability, *Drosophila melanogaster*, 315
  methylated maize *Suppressor-mutator*, TnpA *trans*-activation, transgenic tobacco, 1009
  naturally occurring *P* elements, repression of hybrid dysgenesis, *Drosophila melanogaster*, 605
  natural populations of *E. coli* and *Salmonella typhimurium*, same classes of insertion sequences, 449
  P element transposition, formation of intragenic secondary insertions, *Drosophila melanogaster*, 623
Transposition
  distribution of Ty1 retrotransposon integration positions, ubiquitin-conjugating enzyme RAD6, yeast, 499
  Drosophila P elements, nearby chromosomal sites, 347
  lethal, Mu*d* phages in Rec$^-$ strains, *Salmonella typhimurium*, 17
  P element, efficiency and dispersal, *Drosophila* females, 361
  Tn*7*, hotspot for homologous recombination, *Escherichia coli*, 9
Transposon
  -like family *Bari-1*, heterochromatic organization, *Drosophila melanogaster*, 335
  P, dominant enhancer mutations, position-effect variegation in *Drosophila melanogaster*, 279
7-Tricosene, genetic control of pheromones, *Drosophila simulans*, 561

Ubiquitin, -conjugating enzyme RAD6, distribution, Ty1 retrotransposon integration positions, 499

Woodlice, conflict between feminizing sex ratio distorters, autosomal masculinizing gene, 247

Yeast
a/α-control of DNA repair, genetic and physiological aspects, 489
chromosome *III* meiotic disjunction, short chromosomal region with major roles, 159
conditional allele of *HOP1* gene, suppression by overexpression of *RED1* and *REC104*, 785
conditional mutations in DNA primase genes, DNA metabolism, DNA polymerase α-primase complex, 183
conversion into petite-positive, mutations in *MGI* genes, *Kluyveromyces lactis*, 517
genetic evidence for transcriptional activation, *IME1* gene product, 775
genetic selection, Aspergillus *brlA* response elements, 29
meiotic nondisjunction and recombination, chromosome *III*, homologous fragments, 149
mitochondrial *COX2* messenger RNA, *PET111* action in 5′-leader, 509
mutational analysis of killer toxin resistance
cell wall β-glucan synthesis, 837
reporter gene *CUP1*, 851
mutation in DNA topoisomerase I, DNA damage, *RAD9*-dependent cell cycle arrest, 799
new genes required for meiotic recombination, 51
RAD52 allele expressing C-terminal truncation protein, intragenic complementation, missense mutations, 39
replication-dependent sister chromatid recombination, *rad1* mutants, 469
stimulation of early meiotic gene expression, functionally related genes, 67
telomere-mediated plasmid segregation, transcriptional repression, 171
ubiquitin-conjugating enzyme RAD6, distribution, Ty*1* retrotransposon integration positions, 499
